RE: Approval, Draft Closeout Report for IHSS Group 700-6, Buildings 712/713 Cooling Tower Blowdown, IHSS 700-139.1(S) Caustic/Acid Spills Hydroxide Tank Area, dated September 2004

Dear Mr. Legare:

The Colorado Department of Public Health and Environment, Hazardous Materials and Waste Management Division (the Division) hereby grants approval for the subject closeout report and, as a consequence, No Further Accelerated Action (NFAA) for IHSS Group 700-6. Comment resolution meetings, and subsequent revisions submitted electronically, were successful in resolving the Division's comments. The comments are recorded in the minutes of a September 23, 2004 comment resolution meeting. The most significant resolutions included:

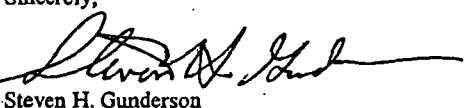

- Uncertainty regarding the status of OPWL below Buildings 712/713 was resolved with the disclosure that the lines had been grouted in place.
- An exceedance of the WRW AL for benzo(a)pyrene at eight feet, while inconsequential, was added to Table 8 and subsequently discussed in several sections including the SSRS, as required. Additionally, arsenic and PAHs were added to the SSRS Screen 4 discussion.
- The Sum of Ratios (SOR) for historical data was discussed qualitatively. This addition was based on a hot spot soil removal, for arsenic, that also contained chromium in excess of its WRW.
- The results of confirmation samples were included in the document as evidence that the hot spot soil removals were sufficient.
